

**COST OF LIVING INDEX (Annual 2017 thru Q4 2020)**

**Q4 2020 MSA COMPARISON**

The *Cost of Living Index (COLI)* measures relative price levels for consumer goods and services in participating areas. The average for all participating places, both metropolitan and nonmetropolitan, equals 100, and each participant's index is read as a percentage of the average for all places. Due to quarterly changes in participants and price inputs, the index does not provide an accurate measure of changes over time. Thus, the information presented is used to demonstrate Tampa COLI's tendency to remain below the national average. The index does not measure inflation.

*\*Note: Due to COVID-19 the Q2 2020 COLI was not measured and Q4 2020 was added for the first time. There is no Q4 2019 comparison.*
